

Elimination of Hydrocarbon Leakages and Spills

Human activities or natural processes inevitably pose a risk of various types of unexpected contaminant releases into environment. In cases of such accidents quick response is of great importance in order to address immediate consequences, which can endanger humans and the environment.

VentEko has a long-term experience and necessary material and technical support for immediate response in elimination of consequences of different scale ecological accidents.

We offer:

- Localization of hydrocarbon spills and leakages;
- Recovering and elimination of NAPL (non aqueous phase liquid) pollution;
- Estimation of preliminary pollution amount;
- Recommendations on further long-term actions of environmental remediation.
