

Geocological assessment

Specialists of VentEko provide professional geocological assessment, which include evaluation of interaction between various environmental elements, assessment of existing situation and forecasting of further developments.

We offer:

- Monitoring and assessment of environmental quality;
- Soil, surface water and groundwater pollution level evaluation;
- Environmental pollution type and amount identification;
- Pollution distribution determination;
- Forecasting of pollution development dynamics;
- Modeling of pollution transport;
- Ecological risk assessment of contaminated areas;
- Recommendations for remediation.
